Twice daily injections

Use in conjunction with Diabetes Management Plan. This plan should be reviewed every year.

**SCHOOL SETTING**

**LOW** Hypoglycaemia (Hypo)

Blood Glucose Level (BGL) less than 4.0 mmol/L

**SIGNS AND SYMPTOMS** Pale, headache, shaky, sweaty, dizzy, drowsy, changes in behaviour

Note: Symptoms may not always be obvious

**DO NOT LEAVE STUDENT ALONE**

**DO NOT DELAY TREATMENT**

**MILD**

Student conscious (Able to eat hypo food)

**SEVERE**

Student drowsy / unconscious (Risk of choking / unable to swallow)

**HELPLINE**

**COLLECT STUDENT**

**First Aid DRSABCD**

Stay with unconscious student

**CALL AN AMBULANCE DIAL 000**

**Step 1:** Give fast acting carbohydrate e.g.

**Step 2:** Recheck BGL in 15 mins

- If BGL less than 4.0, repeat **Step 1**
- If BGL greater than or equal to 4.0, go to **Step 3**

**Step 3:** Give sustaining carbohydrate e.g.

**Student well**

Re-check BGL in 2 hours

Encourage oral fluids, return to activity

1–2 glasses water per hour; extra toilet visits may be required

**Student unwell** (e.g. vomiting)

- Contact parent/carer to collect student ASAP
- Check ketones (if able)

**KETONES**

If unable to contact parent/carer and blood ketones greater than or equal to 1.0 mmol/L or dark purple on urine strip

**CALL AN AMBULANCE DIAL 000**

**HIGH** Hyperglycaemia (Hyper)

Blood Glucose Level (BGL) greater than or equal to 15.0 mmol/L is well above target and requires additional action

**SIGNS AND SYMPTOMS** Increased thirst, extra toilet visits, poor concentration, irritability, tiredness

Note: Symptoms may not always be obvious

**INJECTION**

Insulin will be given before breakfast, at home, before-school care

Please make sure all carbohydrate food is eaten at snack and main meal times.

**THIS STUDENT IS WEARING**

- Continuous Glucose Monitoring (CGM)
- Flash Glucose Monitoring (FGM)

**ROUTINE BGL CHECKING TIMES**

These are still required if student is using CGM/FGM

- Anytime, anywhere in the school
- Before main meal
- Anytime hypo is suspected
- Confirm sensor glucose hypo reading
- Before physical education / sport
- Before exams or tests

**PHYSICAL EDUCATION / SPORT**

- Check BGL before physical education/sport.
- 1 serve of sustaining carbohydrate food before every 30 mins of planned activity.
- Vigorous activity should not be undertaken if BGL is greater than or equal to 15.0 and/or the student is unwell.

**PARENT / CARER NAME**

**CONTACT NO.**

**DIABETES TREATING TEAM**

**CONTACT NO.**

**DATE PLAN CREATED**
Twice daily injections

Diabetes Management Plan 2020

SCHOOL SETTING

Responsibility Staff
School staff who have voluntarily agreed to undertake training and provide support with diabetes care to the student.

<table>
<thead>
<tr>
<th>STAFF MEMBER</th>
<th>GLUCOSE CHECKING</th>
<th>INSULIN ADMINISTRATION</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Insulin Administration
The student is on two injections of insulin per day. Therefore, ALL carbohydrate food must be eaten at regular times throughout the day.

- The student will have their injections at home.
- The student will require an insulin injection before their breakfast at Before School Care.

Insulin dose calculated by: □ Matrix □ Other: _______________________________

Before School Care
Before school care may be provided by the school, or an outside organisation.

Parent/carer to obtain and complete the relevant documentation from this setting, authorising staff to administer/supervise insulin administration to their child.
**BLOOD GLUCOSE LEVEL (BGL) CHECKING**

**Target range for blood glucose levels (BGLs): 4 – 7 mmol/L**
- BGL results outside of this target range are common.
- BGL check should be done where the student is, whenever needed.
- The student should always wash and dry their hands before doing the BGL check.

Blood glucose levels will vary day-to-day and be dependent on a number of factors such as:
- Insulin Dose
- Excitement / stress
- Growth spurts
- Type/quantity of food
- Illness / infection
- Age
- Level of activity

**Is the student able to do their own blood glucose check independently?**
- Yes
- No

If NO, the responsible staff member needs to
- Do the check
- Assist
- Observe
- Remind

**TIMES TO CHECK BGLS (tick all those that apply)**
- Anytime, anywhere
- Before snack
- Before activity
- Before exams/tests
- Before lunch
- Beginning of after-school care session
- When feeling unwell
- Anytime hypo suspected
- Other routine times – please specify ________________

- Further action is required if BGL is **less than 4.0 mmol/L** or **greater than or equal to 15.0 mmo/L**. Refer to Diabetes Action Plan.

- If the meter reads ‘LO’ this means the BGL is too low to be measured by the meter — follow the hypoglycaemia (Hypo) treatment on Diabetes Action Plan.

- If the meter reads ‘HI’ this means the BGL is too high to be measured by the meter — follow hyperglycaemia (Hyper) treatment on Diabetes Action Plan.
SENSOR GLUCOSE (SG) MONITORING

The student is wearing

- **Continuous Glucose Monitor (CGM)**
  - Dexcom G4®
  - Guardian™ Connect
- **Flash Glucose Monitor (FGM)**
  - Freestyle Libre
  - Dexcom G5®
  - Guardian™ Sensor 3

- CGM and FGM consist of a small sensor that sits under the skin and measures glucose levels in the fluid surrounding the cells (interstitial fluid).
- A CGM provides extra information about trends in glucose levels, but are not essential diabetes management tools, unless they are part of a hybrid closed loop diabetes management system.
- CGM technology should cause minimal disruption to learning and classroom activities.
- With CGM, a transmitter sends data to either a receiver, phone app or insulin pump.
- With FGM, the device will only give a glucose reading when the sensor disc is scanned by a reader or phone app.
- A sensor glucose (SG) reading can differ from a finger prick blood glucose reading during times of rapidly changing glucose levels e.g. eating, after insulin administration, during exercise.
- Therefore, **LOW or HIGH SG readings must be confirmed by a finger prick blood glucose check.**

**Hypo treatment is based on a blood glucose finger prick result.**

**CGM ALARMS**

- CGM alarms may be ‘on’ or ‘off’.
- If ‘on’ the CGM will alarm if sensor glucose is low or high.

**ACTION:** Check finger prick blood glucose level (BGL) and follow Diabetes Action Plan for treatment.

- FGM device does not have alarm settings.

**USE AT SCHOOL**

- Staff are not expected to do more than the current routine diabetes care as per the student’s Diabetes Action and Management plans.
- Staff do not need to put CGM apps on their computer, smart phone or carry receivers.
- Parents/carers are the primary contact for any questions regarding CGM/FGM use.
- Some CGM devices can be monitored remotely by family members. They should only contact the school if they foresee a prompt response is required.
- If the sensor/transmitter falls out, staff are required to keep it in a safe place and contact the parent/carer.
- The sensor can remain on the student during water activities.
LOW BLOOD GLUCOSE LEVELS
(Hypoglycaemia / Hypo)

Follow the student’s Diabetes Action Plan if BGL less than 4.0 mmol/L. Mild hypoglycaemia can be treated by using supplies from the student’s HYPO BOX.

HYPO BOX LOCATION/S:

<table>
<thead>
<tr>
<th>HYPO BOX</th>
<th>AMOUNT TO BE GIVEN</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAST ACTING CARBOHYDRATE FOOD</td>
<td></td>
</tr>
<tr>
<td>SUSTAINING CARBOHYDRATE FOOD</td>
<td></td>
</tr>
</tbody>
</table>

• If the student requires more than 2 consecutive fast acting carbohydrate treatments, as per their Diabetes Action Plan, call the student’s parent/carer. Continue hypo treatment if needed while awaiting further advice.
• All hypo treatment foods should be provided by the parent/carer.
• Ideally, packaging should be in serve size bags or containers and labelled as fast acting carbohydrate food and sustaining carbohydrate food.

Mild hypoglycaemia is common. If the student is having more than 3 episodes of low BGLs at school in a week, make sure that the parent/carer is aware.

SEVERE HYPOGLYCAEMIA (HYPO) MANAGEMENT

Severe hypoglycaemia is not common.

Follow the student’s Diabetes Action Plan for any episode of severe hypoglycaemia.

DO NOT attempt to give anything by mouth to the student or rub anything onto the gums as this may lead to choking.
HIGH BLOOD GLUCOSE LEVELS
(Hyperglycaemia / Hyper)

- Although not ideal, BGLs above target range are common.
- If BGL is 15.0 mmol/L or more, follow the student’s Diabetes Action Plan.
- If the student is experiencing frequent episodes of high BGLs at school, make sure the parent/carer is aware.

KETONES

- Ketones occur most commonly when there is not enough insulin in the body.
- Ketones are produced when the body breaks down fat for energy.
- Ketones can be dangerous in high levels.

You will be required to check the student’s ketone level if
- Student is unwell or
- BGL is above 15.0 mmol/L

- Blood ketone check
- Urine ketone check

If ketones are more than 1.0 mmol/L, or dark purple on urine strip, follow action for ketones on the student’s Diabetes Action Plan.

EATING AND DRINKING

- The student should not go for longer than 3 hours without eating a carbohydrate meal or snack.
- Younger students will require supervision to ensure all food is eaten.
- The student should not exchange food/meals with another student.
- Seek parent/carer advice regarding appropriate foods for parties/celebrations that are occurring at school.
- Always allow access to drinking water and toilet (high glucose levels can cause increased thirst and extra toilet visits).

Does the student have coeliac disease?
- No
- Yes*

*Seek parent/carer advice regarding appropriate food and hypo treatments.
PHYSICAL ACTIVITY

A blood glucose meter and hypo treatment should always be available.

- Check blood glucose level before physical activity.
- Physical activity may lower glucose levels.
- The student may require an extra serve of carbohydrate food before every 30 minutes of planned physical activity or swimming as provided in the Activity Food Box.

ACTIVITY FOOD BOX LOCATION:

<table>
<thead>
<tr>
<th>CARBOHYDRATE FOOD TO BE USED</th>
<th>AMOUNT TO BE GIVEN = 1 SERVE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Physical activity should not be undertaken if BGL less than 4.0 mmol/L. Refer to the Diabetes Action Plan for hypo treatment.
- Vigorous activity should not be undertaken if BGL is greater than or equal to 15.0 mmol/L and/or the student is unwell.

EXCURSIONS / INCURSIONS

It is important to plan for extracurricular activities. Consider the following:

- Ensure blood glucose meter, blood glucose strips, ketone strips, hypo and activity food are readily accessible.
- Plan for meal and snack breaks.
- Always have hypo treatment available.
CAMPS

It is important to plan for school camps and consider the following:

• Parents/carers need to be informed of any school camps at the beginning of the year.
• A separate and specific Camp Diabetes Management Plan is required.
• Parents/carers should request a Camp Diabetes Management Plan from their Diabetes Treating Team.
• The student’s Diabetes Treating Team will prepare the Camp Diabetes Management Plan and require at least 4 weeks’ notice to do so.
• Parents/carers will need a copy of the camp menu and activity schedule.
• At least 2 responsible staff attending the camp should have a general understanding of type 1 diabetes and the support that the student requires to manage their condition for the duration of the camp.
• School staff will need to discuss any training needs at least 4 weeks before the camp with the student’s parents/carers or Diabetes Treating Team.

EXAMS

• BGL should be checked before an exam.
• BGL should be greater than 4.0 mmol/L before exam is started.
• Blood glucose meter, monitoring strips, hypo treatments and water should be available in the exam setting.
• Continuous Glucose Monitoring (CGM) or Flash Glucose Monitoring (FGM) devices and receivers (smart phones) should be available in the exam setting.
• Extra time will be required if a hypo occurs or for toilet privileges.

APPLICATIONS FOR SPECIAL CONSIDERATION

National Assessment Program Literacy and Numeracy (NAPLAN)
Applies to Grade 3, Grade 5, Year 7, Year 9. Check National Assessment Program website – Adjustment for student with disability for further information.

South Australian Certificate of Education (SACE)
Applications for special consideration for the South Australian Certificate of Education (SACE) exams should be submitted at the beginning of Year 11 and 12 — check SACE Board requirements.
EQUIPMENT CHECKLIST (daily)

Provided for diabetes care at the school by parent/carer

- Insulin Matrix
- Insulin and syringes
- Insulin pen and pen needles
- Finger prick device loaded with lancet ready for use
- Blood glucose meter
- Spare batteries for blood glucose meter
- Blood glucose strips
- Blood ketone strips
- Urine ketone strips
- Sharps container
- Hypo food
- Activity food

NOTES:
- Only one insulin pen to come to school – quick acting insulin
- Only the relevant insulin matrix to come to school
AGREEMENTS

PARENT/Carer

- I have read, understood and agree with this plan.
- I give consent to the school to communicate with the Diabetes Treating Team about my child’s diabetes management at school.
